

How to Build Your Camera Mount

[Step 1 Select Device]: RAM camera adapters connect directly to the double socket arm [Step 2] and contain a male 1/4"-20 threaded steel stud that will connect to many standard female thread found on camcorders and digital cameras.

[Step 2 Select Arm Type]: The double socket arm contains open pockets that allow the attachment of the adapter [Step 1] and mounting location base [Step 3].

[Step 3 Select Mounting Location]: The mounting location base will attach directly to your vehicle and connects directly to the double socket arm [Step 2].

[Important!]: Before purchasing verify that the female thread found on your device or factory tripod adapter will except a 1/4"-20 male thread.

Select:

Note: The select box must be checked for Step 1, Step 2 and Step 3 to complete your camera mount.

**[Step 1]
